Team Assignment 2: User Stories

Stories:

- User Story 1: ***User Signup***

The user will first be directed to our site by the URL and then proceed to be asked if they want to login or signup, if they are a first time user and try to login then proceed to ***user story 2***. Once the user clicks the signup button, they will be redirected to signup with an email and password. If they don't enter either of the fields then nothing will happen but the field will display a message above it saying that it is a required field. They will then be redirected to start ***user story 3***.

- User Story 2: ***User Login***

The user will first be directed to our site by the URL, and then proceed to be asked if they want to login or signup. If the user enters invalid credentials then we will display a message letting them know that their credentials are invalid and give them a button to start ***user story 1***, if the user forgets to enter one field then it will display a message letting them know the field is required. If it isn't the users first time logging in, then they can simply click the login button, enter their email and password and click enter to proceed to login. This will cause the page to have an account info button on the top right corner and will allow them to proceed to ***user story 3***.

- User Story 3: ***Entering Location Info and Displaying Results***

After the Users login (***User Story 2***) or sign up (***User Story 3***), they will be asked to input a location they want to travel to. Then we build a list of results where the list will show restaurants, bars, night clubs, parks and museums. The user will also have the option to click on any of the locations to see further details including reviews, this will lead them to ***user story 4***. If the user doesn't click on anything then nothing will happen. If the user clicks on our logo on the top of the page then they will be redirected to the main page where they started the beginning of user story 3. The user will have the ability to change the location from the top of the list which will reload the list.

- User Story 4: ***Clicking on a location from the list of locations shown after user story 3***.

The user will have the option to click on any location from the list of locations shown in ***user story 3***. If they click on any of these locations then a sub-list will show up that will inform them of reviews for each of the activities. By clicking a review the user will be redirected to yelp where they can read more reviews.
